

Positive Mental Health Strategies

Autistic children and young people

Sue Granger PhD, MSc. BSc. (Autism Practice Lead SE, NAS)

**We do not want autistic children to have to reach crisis
point before they receive our help**

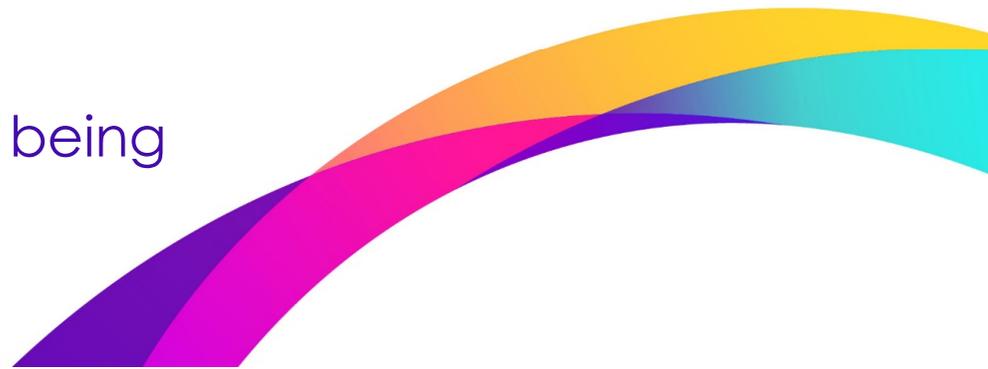

**4 out of 5 autistic children will experience mental health
problems**

This session:

- What is good mental health, and how do we know when it is deteriorating?
- Strategies for preserving good mental health in autistic children.
- Strategies for restoring good mental health
- Creating kit bags
- Importance of taking time out for well being

What do we mean by ‘good mental health’?

It is not just the absence of mental disorder.

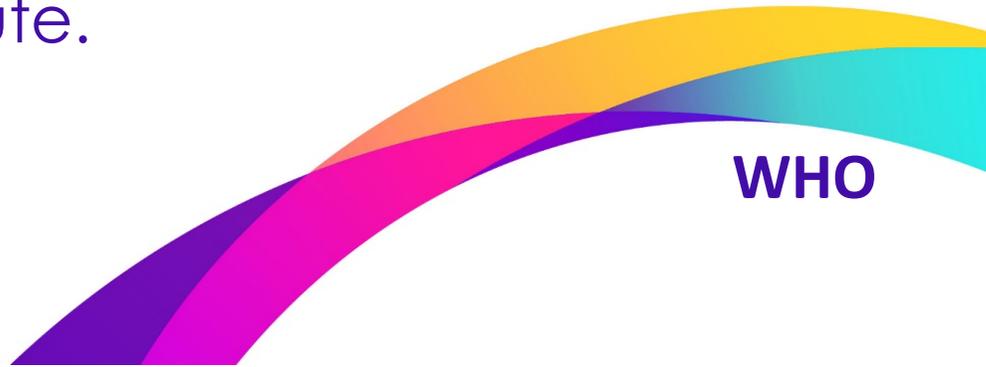

It is a state of well-being.

Feeling able to reach your potential.

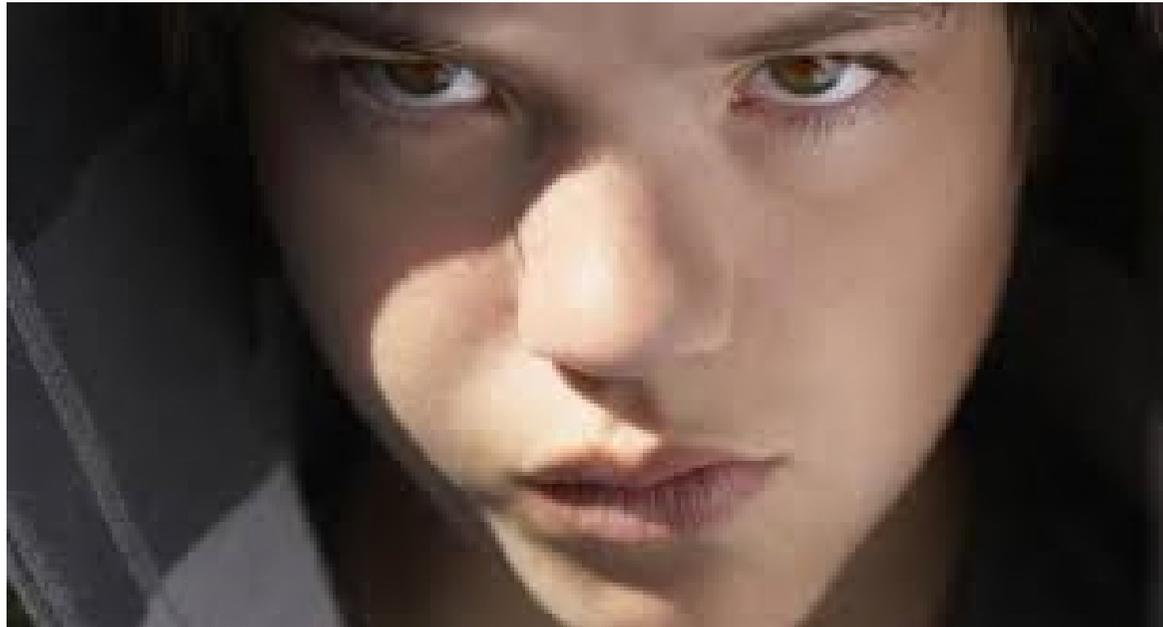

To be able to cope **with the normal stresses of life.**

To be able to work productively.

To contribute.

 WHO

Signs that mental health is deteriorating

Barriers to identifying deteriorating mental health

1. Communication barriers (generally)
2. Difficulties in communicating about emotions (specifically)
3. Difficulties in recognizing emotions - alexithymia
4. Differences in expressing emotions *
5. Masking
6. Difficulties in distinguishing anxiety and depression from autism

‘With hindsight a massive barrier was that I just don’t show emotion the way other people do, so aside from when I was very anorexic no one believed there was anything wrong with me or that I needed help. There are specific things depressed people are supposed to do, but I don’t do them’.

(Camm-Crosbie et al 2018)

Barriers to identifying deteriorating mental health

1. Communication barriers
2. Difficulties in expressing emotions generally
3. Difficulties in recognizing emotions - alexithymia
4. Differences in expressing emotions
5. Masking
6. Difficulties in distinguishing anxiety and depression from autism

Symptoms of high anxiety

- difficulties concentrating
- poor sleep patterns
- poor eating habits
- quick to anger, outbursts/meltdowns
- constantly worrying
- complaining of feeling unwell
- difficulty making decisions
- repetitive behaviours
- retreating from others

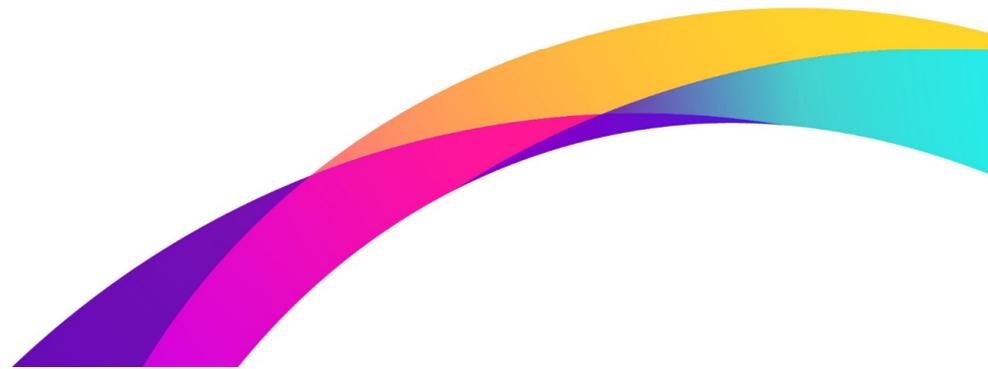

40% autistic children have anxiety at any one time.

Deteriorating mental health

**If a child can't tell us and we can't see it –
how will we know?**

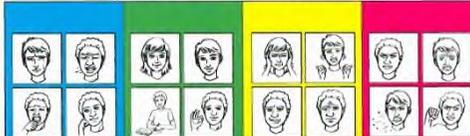

**We do not want autistic children to have to reach crisis
point before they receive help**

How am I feeling right now?

- Vital to prioritise teaching skills to identify and communicate emotions
- E.G. Zones of regulation, 5 point scales, alert scale, mindfulness
- Can also drawing, music etc. to help explore feelings
- Remember expressing your emotions to others is important.
- May be necessary to link to physical signs
- Importance of monitoring over time

The **ZONES** of Regulation®

Sad Sick Tired Bored Moving Slowly	Happy Calm Feeling Okay Focused Ready to Learn	Frustrated Worried Silly/Wiggly Excited Loss of Some Control	Mad/Angry Mean Terrified Yelling/Hitting Out of Control

Know your normal

What's your normal toolkit asks:

- what is normal for this autistic child or young person?
- what is their normal sleep pattern, eating patterns, how do they normally spend their time?
- are these changing? (This could signify a change in mental health)
- What might this mean?

Toolkit can be downloaded
from [Ambitious About Autism
Website!](#)

Preserving good mental health

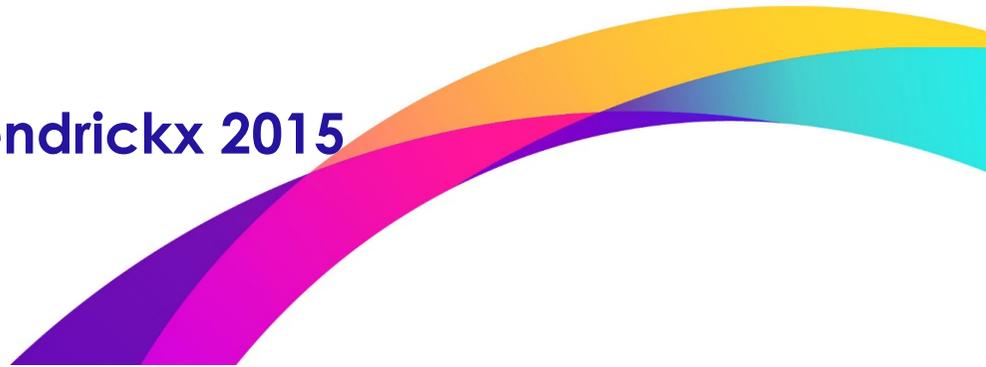

**How do we support autistic children to cope with the
normal stresses of life?**

Creating the right environment for positive mental health

'Supporting the autism will lead naturally to reduction in the crippling and miserable anxiety that many of our autistic children and young people face simply at the thought of going to school'.

Sarah Hendrickx 2015

- How to help me
- Never....

Restoring energy and mental health

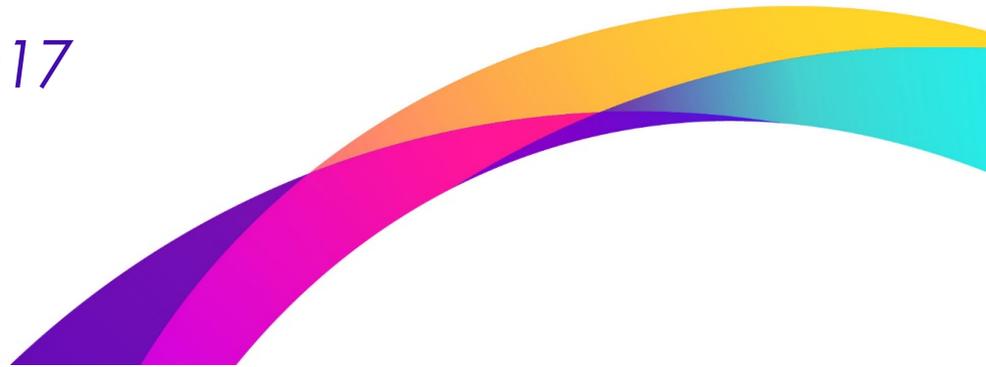

Life is full of stressors...

Daily life can be overwhelming for many autistic people for many different reasons.

“Everything new I encounter – even if it is simply the beginning of another week – is seen through the prism of fear.”

Laura James, 2017

Managing stress (resilience)

- Coping with stress takes energy.
- Over time, this energy depletes.
- What happens when it is gone?

Bank Account

Credit

£80.00

Debit

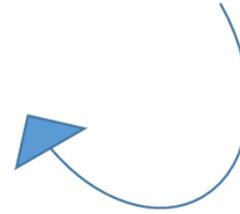

£60.00

Available credit:

+ £20.00

Deposit:

30 minutes special
interest = £30.00

- £10: Dealing with noisy school entrance
- £30.00: Unexpected change in teaching assistant
- £20.00: Confusing social interaction
- £10.00: Having to wait for laptop

Energy Accounting

- Energy accounting
- Spoon theory
- Monitoring your energy levels, your 'reserves'.
- Have I got enough energy to successfully manage what might happen next?

Personalise strategies for restoring energy

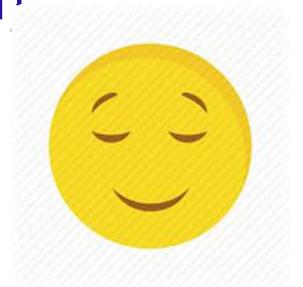

- 
- What makes you feel good?
 - What stops you feeling bad?
 - What calms you down?
 - What is a good distraction?

- General questions are not easy to answer!
- Try *specific* questions e.g. how do they feel before/after your cycle ride?
- Some students may need us to *read their behaviour* to find out the answers
- The answers explain how this child can replenish energy.

Personalised strategies to promote wellbeing

E.G.

- Special interest time, hobbies
- Getting active – gym, yoga
- Time to stim
- Being outside
- Music (ready stored on a playlist is good)
- Quiet space (individualised)
- Expressing worries – journal, art, music etc. (individualised)
- Mindfulness
- Time with animals
- And...

Teaching energy accounting as a life skill

Every day ...

- 7.30am ten mins yoga
- 8.00am time with dog
- 2 hour intervals: OT
- 4.00 pm music for 30 mins
- 7.00pm: favourite interest for 30

- Some autistic children can take ownership
- For others, a vital well-being passport
- A routine needs to be established, *before* mental health deteriorates
- Does not mean these activities cannot be used at other times!

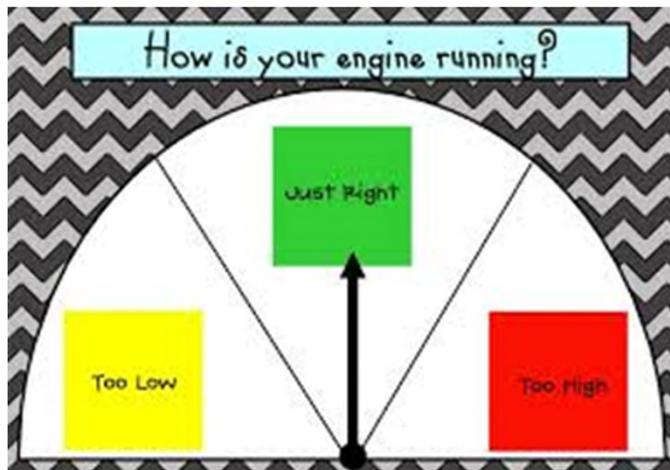

Well-being strategies *need* to be regularly scheduled
in to daily timetables

Creating kit bags

Self-regulation strategies

The ZONES of Regulation®

BLUE ZONE	GREEN ZONE	YELLOW ZONE	RED ZONE
Sad Sick Tired Bored Moving Slowly	Happy Calm Feeling Okay Focused Ready to Learn	Frustrated Worried Silly/Wiggly Excited Loss of Some Control	Mad/Angry Mean Terrified Yelling/Hitting Out of Control

Responding to stress, recovering and...

Every day ...

- 7.00am ten mins yoga
- 8.00am time with dog
- 2 hour intervals: OT
- 4.00 pm music for 30 mins
- 7.00pm: favourite interest for 30 mins

- Taking the time to recover energy as well as self-regulate
- Acknowledging that a child deserves recovery time after a hard experience
- Consider a chill out pass after a hard day

Responding to stress, recovering and **working on wellbeing**

Every day ...

- 7.00am ten mins yoga
- 8.00am time with dog
- 2 hour intervals: OT
- 4.00 pm music for 30 mins
- 7.00pm: favourite interest for 30 mins

- Taking the time to do things which create a sense of well-being
- Every day
- Just because.

Developing a kit bag (+ energy accounting)

Every day ...

- 7.30am ten mins yoga
- 8.00am time with dog
- 2 hour intervals: OT
- 4.00 pm music for 30 mins
- 7.00pm: favourite interest for 30

Time out for mental health

- Assessing well-being
- What is working well?
- What could be developed further?
- Is the child, wherever possible, taking ownership?
- Do we need to seek more professional help?

Summary

- Identify level of mental well-being (Know Your Normal)
 - Prevent anxiety and stress with good consistent autism practice
 - Respond to anxiety, stress and low mood with kit bags and personalised strategies
 - **Time** to plan, **time** to carry out, **time** to assess
 - Consider setting aside specific time each week for well-being and mental health
- 

A statistic we can change.
